The United States has the highest per capita spending on health care of any industrialized nation but continually lags behind other nations in health care outcomes including life expectancy and infant mortality. National health expenditures are projected to exceed \$2.5 trillion in 2009. Given healthcare's direct impact on the economy, there is a critical need to control health care spending. According to The Health

Imperative: Lowering Costs and Improving Outcomes, the costs of health care have strained the federal budget, and negatively affected state governments, the private sector and individuals. Healthcare expenditures have restricted the ability of state and local governments to fund other priorities and have contributed to slowing growth in wages and jobs in the private sector. Moreover, the number of uninsured has risen from 45.7 million in 2007 to 46.3 million in 2008. The Health Imperative: Lowering Costs and Improving Outcomes identifies a number of factors driving expenditure growth including scientific uncertainty, perverse economic and practice incentives, system fragmentation, lack of patient involvement, and under-investment in population health. Experts discussed key levers for catalyzing transformation of the delivery system. A few included streamlined health insurance regulation, administrative simplification and clarification and quality and consistency in treatment. The book is an excellent guide for policymakers at all levels of government, as well as private sector healthcare workers.

Cicely Saunders Elsevier Health Sciences

Born at the end of World War One into a prosperous London family, Cicely Saunders struggled at school before gaining entry to Oxford University to read Politics, Philosophy and Economics. As World War Two gained momentum, she quit academic study to train as a nurse, thereby igniting her lifelong interest in caring for others. Following a back injury, she became a medical social worker, and then in her late 30s, qualified as a physician. By now her focus was on a hugely neglected area of modern health services: the care of the dying. When she opened the world's first modern hospice in 1967 a quiet revolution got underway. Education, research, and clinical practice were combined in a model of 'total care' for terminally ill patients and their families that quickly had a massive impact. In

Cicely Saunders: A Life and Legacy, David Clark draws on interviews, correspondence, and the publications of Cicely Saunders to tell the remarkable story of how she pursued her goals through the complexity of her personal life, the skepticism of others, and the pervasive influence of her religious faith. When she died in 2005, her legacy was firmly established in the growing field of hospice and palliative care, which had now gained global recognition.
